Interested in giving your students the opportunity to learn about graduate school as a chemist?

Consider Chem-STEM!

Chem-STEM is an outreach program that aims to teach high school students about graduate school and possible careers after. The session (~45 mins) involves a brief introduction about graduate school, followed by a Q&A with a volunteer panel which consists of current graduate students and/or postdocs.

If you would like to plan a session with us or would like more details, please contact either Benito Buksh (bbuksh@princeton.edu) or Dali Davis (dalid@princeton.edu).
